

Student Management System

A beginner-friendly **Student Management System** developed using **Python**. This project allows users to manage student records through simple CRUD (Create, Read, Update, Delete) operations. It was built to strengthen my understanding of Python programming, functions, file handling, and basic data management.

Features

-  Add new student records
-  View all student details
-  Update existing student information
-  Delete student records
-  Search for a student by ID or name
-  Store and manage student data efficiently
-  Simple and user-friendly console interface

Technologies Used

- Python 3
- File Handling (or List/Dictionary, if applicable)
- Functions
- Conditional Statements
- Loops

Project Structure

```
Student-Management-System/  
|  
├── main.py           # Main program  
├── student_data.txt  # Data storage (if used)  
├── README.md         # Project documentation  
└── screenshots/      # Project screenshots (optional)
```

How to Run

1. Clone the repository:

```
git clone https://github.com/your-username/student-management-system.git
```

1. Open the project folder:

```
cd student-management-system
```

1. Run the program:

```
python main.py
```

Output

You can add screenshots of the application here after uploading them.

Example:

```
screenshots/home.png  
screenshots/menu.png
```

What I Learned

Through this project, I improved my understanding of:

- Python programming fundamentals
- Functions and modular programming
- File handling
- Data structures (Lists and Dictionaries)
- CRUD operations
- Problem-solving and debugging

Future Improvements

- Add a graphical user interface (GUI)
- Connect with a MySQL or SQLite database
- Add user authentication (Login System)
- Export student records to Excel or CSV
- Improve validation and error handling

Contributing

Suggestions and contributions are always welcome. Feel free to fork this repository and submit a pull request.
